

### MODERN SCHOOLS — THE FUTURE OF A NEW GENERATION AND A NEW UZBEKISTAN

**Nigina Shoyeva**

*Head of the Information Service of the Sho‘rchi District Hokimiyat*

As Uzbekistan enters a new stage of development, one of the most important priorities of the reforms being implemented across the country is investment in human capital, particularly in the education and upbringing of the younger generation.

Today, this process can be clearly seen not only in the capital and major cities, but also in the country's remote regions. The construction of new schools, the renovation of educational institutions, modern classrooms and the creation of new opportunities for children demonstrate that Uzbekistan's approach to education is acquiring increasingly new meaning and substance.

The work being carried out to modernize educational institutions in Sho‘rchi District of Surkhandarya Region is a practical reflection of these transformations.

On the eve of the 35th anniversary of the Independence of the Republic of Uzbekistan, a new building of Secondary School No. 37 in the “Yoshg‘ayrat” mahalla was commissioned. In addition, new extensions built for Secondary Schools No. 19 and No. 69 were also handed over for use by students.

For local residents, this is far more than the commissioning of another construction project. It is an important social development directly connected

with the future of their children. For every family, ensuring that children receive education in decent conditions and acquire modern knowledge and skills is one of their most important aspirations.

### A School Is Not Just a Building — It Is a Doorway to the Future

“The new educational buildings have been equipped in accordance with modern requirements,” says Nodira Ishnazarova, Principal of School No. 37.

“Bright and comfortable classrooms, modern furniture, technical equipment and renovated subject rooms are creating the necessary conditions for students to receive quality education. The improvement of school grounds has also given educational institutions a more modern and attractive appearance.

Such conditions, above all, help increase students’ interest in learning, enable teachers to work more effectively and make the educational process more meaningful and productive.

However, the importance of a new school cannot be measured only by its buildings, classrooms or equipment.

A School Is Where the Future of Society Takes Shape

A child does not simply study academic subjects at school. It is here that they learn to think independently, explore, work as part of a team, demonstrate their abilities and develop a sense of responsibility toward their homeland.

**In this sense, every modern school is an investment in the generation of the future.** Investment in Education — An Important Measure of Regional Development

Today, the competitiveness of countries around the world is increasingly determined not by their natural resources alone, but by their human capital and the knowledge and skills of their people.

From this perspective, modernizing schools is not merely a task for the education sector. It is a process directly connected with the economic, social and intellectual development of society.

A student sitting at a school desk today may become tomorrow's doctor, engineer, teacher, entrepreneur, scientist or highly qualified specialist in another field.

Therefore, every opportunity created for a child today is an opportunity created for tomorrow.

The efforts to improve educational infrastructure in Sho'rchi District are fully aligned with this long-term vision.

**New Opportunities — New Dreams**

In districts such as Sho'rchi, where the population is large and young people make up a significant share of society, strengthening the material and technical base of schools is particularly important.

The construction of new buildings creates additional opportunities for students while also helping organize the educational process in accordance with modern standards.

This is especially important at a time when young people's interest in science, modern technologies, foreign languages and new professions is rapidly growing. Schools must therefore provide an environment that meets the demands of the modern world.

Today's students are different from those of previous generations. They have access to the global information space, can acquire knowledge from a wide range of sources and compete with their peers around the world. Therefore, the environment in which they receive their education must also keep pace with the times.

**"Every Well-Maintained School Is a Door Opened to Knowledge"**

Akbarali Ishmurzoyev, Hokim of Sho'rchi District and Deputy of the Sho'rchi District Council of People's Deputies, emphasized the importance of creating favorable conditions in educational institutions and noted that the primary objective of these efforts is to provide children with an environment conducive to quality education.

"Thanks to the development and construction work carried out within a short period, our schools have acquired a completely new appearance. Most importantly, favorable conditions have been created for our children to receive a quality education," the district hokim said.

"Every well-maintained school is a door opened to knowledge, and every opportunity created for our children is a solid step toward a great future. Today's modern school will educate a generation that is knowledgeable, patriotic and competitive tomorrow."

These words reflect the true essence of a modern school.

At the heart of every transformation taking place in schools is a human being — a child and their future.

### From Construction and Renewal to Sustainable Development

The modernization of educational institutions is also becoming an integral part of the broader processes of urban improvement and infrastructure development taking place in Shoʻrchi District.

The transformation of roads, social facilities, mahallas and educational institutions has a direct impact on the quality of life of the population.

In this sense, the modernization of schools is important not only for students and teachers, but also for the life of the entire local community.

A school is the face of a mahalla. Its appearance contributes to the overall image of the area, while the quality of education determines the intellectual potential of society.

### A New Generation for a New Uzbekistan

Speakers at the event highlighted the importance of the reforms being implemented in Uzbekistan, the growing attention to education, the modernization of schools and the creation of broader opportunities for young people.

These developments demonstrate that the younger generation remains one of the key priorities of Uzbekistan's state policy.

After all, a school is a place that helps shape the future face of society.

The children studying in these schools today will tomorrow find their place in various sectors of the country. Their knowledge, worldview, professional potential and active civic position will have a direct impact on Uzbekistan's future development.

Therefore, the school buildings rising today should not be viewed merely as construction projects. They can be regarded as a foundation being laid for the future of the nation.

The most important result of education reforms in Uzbekistan can be seen not only in figures and reports, but in the lives of children who enter their schools every day with hope, curiosity and joy.

**Today's Schools Are Building Tomorrow's Uzbekistan**

The schools being built today will contribute to the intellectual potential of tomorrow's Uzbekistan.

Buildings may eventually become outdated. But the knowledge given to a child, the opportunities created for them and the dreams awakened in their hearts are among the greatest treasures that can be passed from one generation to another.

New schools mean new opportunities. New opportunities mean a new generation and a new future.
